

# BIG RED Curb Inlet Protector

The Big Red filter is a REUSABLE inlet protector that prevents sediment from leaving the jobsite during construction. There are no pockets to fill, no velcro bags, and no assembly is required. Simply place Big Red in front of the inlet, making sure it lays in the contour, and you are DONE!

#### Big Red Curb Inlet Protector Advantages:

- Easy to install
- Versatile for a variety of curb inlets
- Reusable and extremely easy to clean
- Made from 90% inert recycled materials

Simple installation translates into simple removal, cleanup, and reuse at the next project or phase. Maintenance is as easy as lifting the filter from the inlet, shaking off the mud, removing any sediment on the concrete, and putting it back in place. If it contains an excessive amount of sediment, simply wash out the filter in a vegetated area and Big Red will be as good as new.

All of these features and benefits combine to make Big Red curb inlet protector the perfect choice for any curb inlet application. Big Red is available in 7 1/2" diameter X 10' long sections that weigh approximately 85 pounds. Custom sizes are also available upon request.

Property	Test	Units	Value
Weight	ASTM D5261	oz/sq yd	9.3
Grab Tensile Strength	ASTM D4632	lb	warp 250 fill 290
Tear Strength	ASTM D4533	lb	warp 60 fill 50
Burst	ASTM D3786	psi	440
